

WPT - R

Wonderlic Personnel Test Revised

Extensive research has shown that cognitive ability tests increase the likelihood of hiring the right person for the right job. This holds true for all professions in all selection processes. WPT-R provides a concise and comprehensive measurement of general cognitive ability and problem-solving ability. The results provide a good estimate of how easy it will be for a person to learn new information and solve problems, as well as how intellectually challenging he or she may find the job. By using the WPT you can shorten the training time for new employees and increase your likelihood of hiring the right person for the right job. Kandidata retains the Swedish sole right to the WPT.

What does WPT-R measure?

The test measures general problem-solving ability and provides insight into individuals ability to:

- Learn a specific job
- Solve problems in an accurate and fast manner
- Understand instructions
- Apply knowledge to new situations
- Benefit from specific job training
- Thrive in a specific role
- Manage stress

How is WPT-R used?

- Recruitment
- Selection/Promotion

How is WPT constructed?

WPT-R is the sequel to the classic WPT test and is based on the latest research and technology of work psychological testing. The test includes verbal, numerical, spatial and analytical ability, summarized in a so-called G-factor, which measures general intelligence. The test consists of 50 tasks to be solved in a limited period of time. The results are compared a relevant norm group in our database.

How are the results presented?

The results are presented in a customized format based on the client's needs.

Underlying theory

Based on more than 80 years of documented research. Meta studies show a high predictive value with regard to job success for cognitive ability tests in general and WPT-R in particular.

Country of origin and year

- USA, 1940s.
- Sweden, 1997.

Norming

The normal working population. During the more than 75 years in which WPT has been used, very large norm groups (almost 700,000 people) have been built up. The norm groups are categorized according to gender, age, education, type of job and work duties. Kandidata has built up its own database of more than 4,500 individuals as the basis for the Swedish norming process.

Validity

Mean validity 0.63.

Reliability

0.73–0.95.

Required training

- A half-day's training for independent use
- Qualification requirement
- Other usage will be done in collaboration with the consultants at Kandidata.
